

Parser Testing Matrix Indicator: Database Mismatch Variant (Perfect Python/Flask match, but works exclusively with NoSQL/MongoDB instead of relational MySQL)

Siddharth Bhat

Software Engineering Candidate

PROFESSIONAL SUMMARY

Backend Application Developer who specializes in writing non-blocking web controller hooks. Experienced with Python environments but deeply focused on NoSQL horizontal scale solutions instead of standard relational systems.

TECHNICAL CAPABILITIES MATRIX

Core Competencies: Python, Flask, MongoDB, Redis, REST APIs, Git, VS Code, Docker

PROFESSIONAL EXPERIENCE

Cloud Backend Intern | Nexus Tech (4 Months)

- Built flexible backend server loops inside Python and Flask to route client transactions.
- Managed non-relational document configurations via MongoDB, steering clear of standard tabular schemas.

TECHNICAL PROJECTS PORTFOLIO

Scalable Device Log Ingestion Hub: Crafted a high-throughput Flask channel storing nested system event strings.
